

No Bullshit Guide to Statistics
Table of Contents
v0.3 (pre-release July 2019)

Contents

Preface	vi
1 Introduction	1
I Data	4
2 Data in the abstract	6
3 Real-world data	7
4 Descriptive statistics	9
4.1 Formulas	10
4.2 Exploring education data	12
4.3 Numeric data	14
4.4 Categorical data	23
4.5 Comparing two numeric variables	25
4.6 Comparing two categorical variables	28
4.7 Comparing a categorical and a numerical variable	31
4.8 Explanations	33
4.9 Discussion	38
4.10 Links	40
II Probability	41
21 Introduction	44
21.1 Probability models	45

21.2 Applications	47
21.3 Overview of probability chapters	50
21 Probability theory	52
21.1 Definitions	52
21.2 Explanations	59
21.3 Multiple random variables	68
21.4 Probability models	72
21.5 Discussion	81
22 Math prerequisites	85
22.1 Sets	86
22.2 Functions	89
22.3 Calculus	100
22.4 Combinatorics	127
23 Discrete probability distributions	132
23.1 Discrete distributions reference	133
23.2 Plotting distributions	148
23.3 Modelling real-world data using probability	148
23.4 Exercises	149
23.5 Chapter summary	150
23.6 Discrete distributions problems	150
24 Continuous probability distributions	152
24.1 Probability density functions	152
24.2 Mathematical prerequisites	154
24.3 Continuous distributions reference	154
24.4 Sampling distributions	158
24.5 Central limit theorem	158
24.6 Discussion	159
24.7 Exercises	160
24.8 Continuous distributions problems	160

26 Extra topics	163
26.1 Law of large numbers	165
III Statistics	167
26.2 Statistics prerequisites	174
32 Estimators	1
32.1 Introducing estimators	1
32.2 Definitions	4
32.3 Formulas	7
32.4 Example	11
32.5 Understanding why estimators work	13
32.6 Explanations	16
32.7 Properties of estimators	17
32.8 Sampling distributions reference	21
32.9 Applications	25
32.10 Discussion	26
32.11 Links	26
32.12 Problems	27
32.13 Estimators problems	27
32 Null Hypothesis Significance Testing	28
32.1 Definitions	29
32.2 Statistical model for beer prices	38
32.3 Explanations	51
32.4 Discussion	60
32.5 Exercises	65
32.6 Links	65
33 Parametric tests	67
34 Parametric tests	68

IV Machine learning	69
41 Introduction to machine learning	72
41.1 Using machine learning instead of interns	73
41.2 Definitions	78
41.3 Examples of machine learning tasks	79
41.4 Discussion	83
42 Machine learning systems	87
42.1 Definitions	87
42.2 Machine learning research	88
42.3 Machine learning in practice	89
42.4 Example of an end-to-end system	97
42.5 Discussion	104
43 Machine learning models	105
43.1 Definitions	106
43.2 Supervised	109
43.3 Unsupervised	130
43.4 Bayesian models	133
43.5 Reinforcement learning	135
43.6 Deep learning	137
43.7 Links	149
44 Tricks of the trade	150
44.1 Data preprocessing	150
44.2 Controlling model capacity	154
44.3 Model and hyperparameter selection	154
44.4 Regularization	159
44.5 Optimization techniques	160
44.6 Transfer learning	161
44.7 Combining models	161
44.8 Model debugging	165
44.9 Human aspects	166

45 Case studies	167
45.1 MNIST handwritten digit recognition task	167
45.2 Auto-tagging system	169
45.3 Summary of research	169
46 Conclusion	177
A Notation	179
Math notation	180
Set notation	181
Data notation	182
Probability notation	182
Probability distributions reference	183
Statistics notation	183
Machine learning notation	184
Notation for matrices and matrix operations	185
Vectors notation	186
Calculus notation	187
Bibliography	188
